ENER-J Smart RGB LED Strip Receiver allows you to control and manage your LED Strip from your Smartphone

Unlimited Distance Control

Link the controller to your strip lights and connect Wi-Fi through the free ENERJSMART App. No matter where you are, you can control your RGB LED strips light turn off or on with your smart phone (IOS & Android).

Dynamic Gradient Brightness & Colours

The controller can change the three basic colours to 16 million and dimming LED strip light from 100% to 1% with our App, regulating in a wide range and helping you elevate your mood.

DIY Favourite Flashing

The controller can make the strip light up continuously also can flicker. You can edit your favourite flashing speed and flashing colour combination at scene mode. Different flashing correspond to different scenes and moods.

Works with Alexa

You can control each Wi-Fi controller individually, or together as a group with our APP and then use Amazon Alexa for voice control.

Applications

We can use the timer functions for waking up and setting a more ambient mood at bedtime. Set a schedule for the lights to automatically turn on and off on you schedule.

We can control the light colour, intensity and set up custom flash, strobe, fade colours and flash to sound/music played from the phone, tablet. Great for holidays and events like Christmas, Halloween, parties.

A wifi RGB controller can connect several strip lights. So, you can schedule it to turn on or off at specific time with one or more lights by using our APP.
